

Centauri Relay[®]

Centauri's Relay engine was built to ensure complete and accurate submission of EDPS and RAPS data to CMS. Empowered by the robust Relay processing and validation engine, our experienced team works with clients to develop a customized roadmap for complete, accurate and timely data submission.

Centauri recognizes that each client's deployment of staff, process and technology requires a tailored solution to maximize the accessibility and usage of your risk adjustment data. We work collaboratively to address data quality issues, implement industry best practices and enhance revenue integrity operations.

RAPS/EDPS SUBMISSION

- **Tailored Planning:** The pairing of our flexible, scalable systems with our deep subject matter expertise allows us to develop and implement plans that are unique to every client and their operational and financial goals and realities.
- **Data Quality:** Our team conducts a quarterly data quality evaluation to arm each client with specific feedback on data quality issues that affect data completeness and timeliness and suggestions for mitigation strategies. This allows our current clients to achieve well above a 95 percent acceptance rate.
- **Impact Analysis:** For those encounters that do not pass validation rules prior to submission, we provide reporting that quantifies the cost in risk-adjusted dollars, as well as EDPS and RAPS comparative analytics to assist in prioritization of error correction.

Centauri Relay[®]

Our Encounters team has more than 100 years of combined experience and a unique understanding of revenue cycle management. Our deep expertise extends beyond EDPS, RAPS and the risk adjustment end of the cycle and provides valuable insight into each client's individual strategic roadmap.

We understand how issues at the front end of the revenue cycle impact the back end, including EDI, enrollment operation, provider systems administration and claims operations. This understanding allows Centauri to work with clients to create unique and comprehensive solutions that address business issues across the revenue cycle, ensuring risk adjustment compliance and payment accuracy.

FEATURES & BENEFITS

- **Transparency:** Our interactive, real-time dashboard facilitates end-to-end revenue cycle management, audit trail and preservation of historical lineage of encounters and RAPS submissions, including EDPS and RAPS comparative analysis and the submission of supplemental review data.
- **Flexibility:** Our system has the ability to accept data in any format as long as minimum data requirements are met. Our team then works in partnership with clients to address their unique data quality issues and to provide the reconciliation intelligence and reporting that best suits their needs.
- **Collaboration:** Each client is assigned a Client Services Representative to assist in the implementation and ongoing maintenance of the relationship, including regular team meetings with a Centauri submissions expert. The expert also provides a quarterly analysis and review of CMS health plan report cards and annual metrics reporting.
