

Identify and Act Before Signals Become Gaps.

Clearer signals.
Connected
action.
Stronger
performance.

Clinical Connect for health plans brings risk adjustment, quality, and care management solutions together so health plans get the right information, connect with the right stakeholders, and keep member care on track, without adding work to already stretched teams.

When information moves faster, care moves forward.

By unifying clinical data exchange, event alerting, electronic retrieval, and data insight into one connected workflow, Clinical Connect streamlines communication with providers, reduces manual tracking, and surfaces the right information at the right moment.

Atlas

Identifies actionable risk adjustment opportunities from clinical data.

Notify

Real-time health event alerting, in the EHR workflow.

Scout

Smarter medical record retrieval, start to finish.

Spot

Validate first. Send better data downstream.

Connected healthcare.

Measurable Impact for Health Plans

- Surfaces missed diagnoses and unsupported codes before submission, not after audit
- Delivers critical health events information into the provider's EHR

2M+ Connections
Clinicians, providers, hospitals,
labs, EHRs & HIEs

Measurable Impact for Population Health

- Improves care coordination and continuity across every transition
- Strengthens HEDIS, Star Ratings, and risk adjustment performance.

10–20X
Return on investment for
health plan partners

Award-Winning Solutions – Solving Health Plan Challenges

Atlas

Supports prospective and retrospective risk adjustment by surfacing evidence-based documentation opportunities across the risk adjustment lifecycle.

- Connects each opportunity to its supporting clinical evidence.
- Routes every suggestion through human verification before it's finalized.

Notify

Monitors admissions, discharges, transfers, ED visits, and other critical events across a plan's population, giving quality, care management, and risk adjustment teams visibility into member activity.

- Tracks event data in real time as it happens across care settings.
- Correlates events with member context to flag relevant risk, quality, or care follow-up.

Scout

Electronically retrieves clinical records and supporting documentation needed for risk adjustment, quality, care management, and other clinical workflows.

- Manages the full process, from request through receipt.
- Applies patient matching designed to minimize false positives.

Spot

Curates data and routes it to the right downstream workflow, whether risk adjustment, quality, or care management, in the format each team needs.

- Delivers the right data, in the right format, to the right team.
- Filters and prioritizes what's relevant, reducing noise and blind searching.

Built for Regulated, High-Stakes Programs

HITRUST r2-certified infrastructure with controls designed to support secure, traceable clinical data workflows.
